

Corporate Wireless LAN

Our service

The Corporate Wireless LAN from Monzoon Networks enables companies to set up a wireless LAN to meet a broad spectrum of specific requirements. Strictly segregated internal and public connections gives your staff encrypted access to the corporate VPN or intranet, while visitors and customers get direct Internet access via the public network.

Features

By drawing on Monzoon Networks' longstanding experience as a public wireless LAN operator, a corporate wireless LAN can integrate these features:

- ■ ■ Direct public access to the Internet
- ■ ■ Hidden SSID for encrypted data traffic between a local device and a VPN server
- ■ ■ Completely standalone, independent infrastructure that does not affect your existing infrastructure in any way whatsoever
