

Virtual Public IP Service

Our service

Virtual Public IP from Monzoon provides virtual, redundant Internet access with static IP addresses as required. For the local/physical Internet connection, you can use low-cost offerings (even with dynamic IP addresses). Monzoon supplies you with a managed router (or two for router redundancy); the router establishes a tunnel to Monzoon's secure back-end via any existing physical Internet link. Static IP addresses are then routed through these tunnels.

Features

- ■ ■ Superior availability using low-cost consumer Internet links
- ■ ■ Allows you to bundle a cable and a DSL connection
- ■ ■ Readily switch to a new local ISP without address renumbering
- ■ ■ Optional encryption possible
- ■ ■ Advice on optimizing your individual Internet access
