Web Content Filtering

Our service

Surfing the Internet can also bring a variety of threats, unethical websites, and liability claims. Monzoon's Web Filtering Service is based on a hosting solution at a secure data center that provides web URL filtering for hotspots and other customers. Internet content is filtered to comply with company or individual policy. This monthly service is based on website categories and ratings that are updated regularly, with a choice of standard or custom categories.

Features

- No hardware, so no investment in costly on-premises solutions

- Regular updates

- Your choice of customized categories or quick-and-easy standard categories

- Fits in well with operating a local hotspot
